

Amendments to the Claims

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims

Claim 1 (Currently Amended): A mobile-type electronic apparatus, comprising:
communication means capable of transmitting and receiving image data;
a display element portion arranged to display image data;
enlargement display means arranged having a prism mounted on the display portion and formed on reflecting or refracting surfaces thereon to optically enlarge an image on said display element portion and to display the enlarged image as a virtual image;
a display circuit arranged to cause said display element portion to display image data;
operation means for controlling said display circuit; and
control means for controlling a power supply for said display circuit in accordance with an operation on said operation means.

Claim 2 (Currently Amended): A mobile-type electronic apparatus, comprising:
communication means capable of transmitting and receiving image data;
an operation information display element arranged to display information necessary for performing a communicating operation;
an image display element portion arranged to display image data;
enlargement display means arranged having a prism mounted on the enlargement display portion and formed on reflecting or refracting surfaces thereon to optically enlarge an

image on said image display element portion and to display the enlarged image as a virtual image;

a display circuit arranged to cause said image display element portion to display image data;

operation means for controlling said display circuit; and

control means for controlling a power supply for said display circuit in accordance with an operation on said operation means.

Claim 3 (Original): A mobile-type electronic apparatus according to claim 1 or 2, wherein said operation means is composed of a switch arranged to change an output thereof every time said switch is manually operated.

Claim 4 (Currently Amended): A mobile-type electronic apparatus, comprising:

communication means capable of transmitting and receiving image data;

a display element portion arranged to display image data;

enlargement display means arranged having a prism mounted on the image display portion and formed on reflecting or refracting surfaces thereon to optically enlarge an image on said display element portion and to display the enlarged image as a virtual image;

a display circuit arranged to cause said display element portion to display image data;

detecting means for detecting that a body of said electronic apparatus has been grasped by hand; and

control means for turning on a power supply for a part of or the whole of said display circuit when said detecting means has detected that the body of said electronic apparatus has been grasped by hand.

Claim 5 (Currently Amended): A mobile-type electronic apparatus, comprising:

communication means capable of transmitting and receiving image data;

a display element portion arranged to display information necessary for a communicating operation;

enlargement display means arranged having a prism mounted on the enlargement display portion and formed on reflecting or refracting surfaces thereon to optically enlarge an image on said display element portion and to display the enlarged image as a virtual image;

a display circuit arranged to cause said display element portion to display image data;

discriminating means for discriminating a communicating state of said communication means; and

control means for controlling a power supply for said display circuit in accordance with an output of said discriminating means.

Claim 6 (Original): A mobile-type electronic apparatus according to claim 5, wherein said control circuit turns on the power supply for said display circuit when said discriminating means has detected a state of communicating image data or information to be displayed, and turns off the power supply for a part of or whole of said display circuit when said discriminating means has detected a state of communicating an audio signal only.

Claim 7 (Currently Amended): A mobile-type electronic apparatus, comprising:

communication means capable of transmitting and receiving image data;

a display element portion arranged to display image data or information necessary for a communicating operation;

enlargement display means arranged having a prism mounted on the enlargement display portion and formed on reflecting or refracting surfaces thereon to optically enlarge an image on said display element portion and to display the enlarged image as a virtual image;

a display circuit arranged to cause said display ~~element~~ portion to display image data;
detecting means for detecting that said enlargement display means has been peeped at;
and

control means for controlling a power supply for said display circuit in accordance
with an output of said detecting means.

Claim 8 (Original): A mobile-type electronic apparatus according to claim 7,
wherein said control circuit turns on the power supply for said display circuit when said
detecting means has detected that said enlargement display means has been peeped at, and
turns off the power supply for a part of or whole of said display circuit when said detecting
means has detected that said enlargement display means is not peeped at.
